MigrationPro:
WooCommerce To PrestaShop Guide

1. Preparation

For Source WooCommerce:

- Please ensure you have the right permission to upload files into your Source WooCommerce.
- It must not block access from Target PrestaShop to the connecter file.

Source WooCommerce can operate normally during migration as it requires a very limited resource for the process.

For Target PrestaShop:

- Target PrestaShop should be placed in a stable hosting or in localhost.
- PHP Curl must be enabled.
- PHP Fopen (allow_url_fopen) must be On.
- It also must not block connection to Source WooCommerce.
- Webserver (mostly apache) should have full permission to write on /img folder.
- Demo mode on backend should be turned off ● base64_decode should be allowed.

It is strongly recommended to **backup Target PrestaShop** first.

2. Setup

1. After downloading the module zip file, install module to Target PrestaShop.

MigrationPro: WooCommerce To PrestaShop is a Prestashop Module which acts like a hub at Prestashop side to receive data and import it into Prestashop database. It can be installed just like all other Prestashop Modules:

1. Using your FTP software, upload the folder "modules" to your PrestaShop root folder.
2. Go to Back Office => Modules.
3. Locate the new module in the list, scrolling down if necessary.

4. In the row for the new module, click Install.

2. Source WooCommerce Connector Module

Download connector zip WordPress plugin from module page:

🏷 MIGRATION GUIDE: DOCUMENTATION

» PDF documentation to configure the module : Documentazione

» WooCommerce Connector Plugin : the connector module

Install the Connector plugin into source WordPress.

3. Migration

Please login your Target PrestaShop backend, Go to "Modules and Services" and find

"MigrationPro: WooCommerce To PrestaShop"

The migration will go through 3 simple steps. Just hit "Next" when you finish one step to advance.

Step 1: Source WooCommerce Connection

- Source Url: source WooCommerce base url, please enter the correct url like as http://your-source-woocommerce-domain.com

Step 2: Migration Configuration

- Currencies Mapping: Assign Source WooCommerce currencies to proper Target Prestashop currencies. Creating currencies in Target Prestashop may be needed.

- Languages Mapping: If your Source WooCommerce is multilingual, corresponding languages (or store views) should be available in Target Prestashop. You may need to create additional languages in PrestaShop to avoid data loss.

- Orders Status Mapping: Assign Source WooCommerce order statuses to proper Target Prestashop order statuses. Creating additional order statuses in Target Prestashop PrestaShop may be needed.

- Customer Groups Mapping: Assign Source WooCommerce customer group to proper Target Prestashop customer group. Creating additional customer group in Target Prestashop PrestaShop may be needed.

  Entities to Migrate: select all entities to migrate or just a part of them.

⚙ ADDITIONAL OPTIONS

Clean Target	SÌ	NO

*Clean target PrestaShop data before migration.*

Migrate recent data	SÌ	NO

Migrate recent data only (will work only after a first migration)

Additional Options:

- Clean Target Store PrestaShop before Migration: if you choose this option, all current products, categories, manufacturers, customers, orders, product reviews, taxes will be cleared.

- Preserve Category IDs on Target PrestaShop: this will help you preserve your old Category IDs for easier reference.

- Preserve Product IDs on Target PrestaShop: this will help you preserve your old Product IDs for easier reference.

- Preserve Customer IDs on Target PrestaShop: this will help you preserve your old Customer IDs for easier reference.

- Preserve Order IDs on Target PrestaShop: this will help you preserve your old Order IDs for easier reference.

Step 3: Migration

The migration will take place automatically in this final step. In order for it to progress, you should not close your browser or remove Source WooCommerce Connector file. Progress bar shows percentage of migrated data.

After the migration is completed, click on "Clear Cache and Re-build Index" to finish. If you don't want to run it right here or it returns false for any reason, you can do that manually in "Advanced Parameters => Performance => Clear Cache" and "Preferences => Search => Re-build the entire index".

Customer Password Migration settings:

"MigrationPro: WooCommerce To PrestaShop" provides a possibility to migrate customer passwords while transferring data from WooCommerce to PrestaShop. For keep old password need everytime keep enabled the module.
